With half-drop window option (XP) and neoprene protector (A)

Neoprene protector. Multi-layer construction filled with polyurethane foam which provides shock protection in the area of scanner mechanism and screen.

Important for scanners of 3000 series which are not equipped with rubber fenders (like in 9000 series). For scanners of 9000 series it provides additional shock protection.

Openings on the top part of the case is formed in such a way as not to hinder the use of the computer.

Half-drop window made of polycarbon protects from atmospheric conditions and scratches. It provides shock protection and thermal barrier. It limits the wear of the scanner.

Openings on both sides of the computer provide easy access to side steering keys.

A secure and resistant fastening of the arm belt. Metallic semicircles. Arm belt is provided as standard equipment. It facilitates transportation and increases functionality of the computer.

The closing system of the holster enables access to the junction and exchange of battery without the necessity of removal of the computer from the holster. The hatch is made of natural leather. Snap fasteners without nickel made by German Prym-Fiocchi. Reclosable fastener tape is made by YKK from Japan.

The closing hatch is constructed such a way that after placing the computer in the holster it is possible to use the belt grip of the computer.

Grip for fastening of the pen of the touch-screen option
